

Spray Polyurethane Foam –Livability-Affordability

By Gary Talbott

Wow! The rain is over and the Temperature is rising. The whole state is experiencing the Heat Wave. Temperatures over the 100 degree mark are common place. Even in the High Elevations people are feeling the Heat, Truckee in the 90's

With extreme Hot Temperatures, the Air Conditioners are running constantly. The Power/Utility Companies are calling for conservation. The threats of Blackouts are real!

Are you in the market a new house? Now is the time to look at ways to beat the heat and save your hard earned California Gold.

Families that are buying or building a new home are thinking about affordability and comfort.

Spray Polyurethane Foam (SPF) is the best insulation you can install. It's comfortable, cost effective, and environmentally friendly. It even is made with renewable agricultural recourses.

Standard fiberglass seems cheaper if you only look at the price tag. But once you learn about the All Temperature Thermal Performance and Factor in the monthly savings on your energy bill, you quickly realize that fiberglass costs homeowners more money, starting the day they move in.

Spray Polyurethane Foam keeps your heating and cooling inside, the elements, noise, dust, and pollen outside, and as much money as possible in your wallet. It's simply the Highest Performance Insulation you can install.
